

AP Notify

Mass Notification System

AP Notify

Notify Thousands of School Community Contacts in an Instant via Email, Text and Voice Messaging.

Rediker Software's **AP Notify** feature for the AdminPlus Student Information System puts the power in your hands to **keep your school community informed** about important school information. AP Notify is simple to use and ideal for:

- ➔ Cancellations and Delays
- ➔ News and Event Updates
- ➔ Emergency Alerts
- ➔ Attendance Notifications

- **Schedule** your notification messages to launch at a specific time.
- Select any combination of students, staff and contacts using **field-matching criteria** such as: by grades, by contact relationships, by unique database field, etc.
- AP Notify is embedded directly within AdminPlus so the notification **source data is always up to date**. Many other notification solutions require a nightly sync to an outside portal.
- Review a **detailed log** that audits success or failure for each recipient.
- **Phone numbers** do not have to be "scrubbed". The interface automatically ignores formatting such as spaces, dashes, decimals, and parentheses when looking for 10 numeric digits.
