

AdminPlus Notify

Quickly and Easily Notify Your School Community Directly in AdminPlus

Keep your entire school community informed. **AdminPlus Notify** gives you the ability to quickly notify thousands of contacts within your school community via email, text and voice message without having to import or sync data. AdminPlus Notify is simple to use and ideal for:

- ✓ School Cancellations and Delays
- ✓ Emergency Alerts
- ✓ News Updates and Events
- ✓ Attendance Notifications

The AdminPlus Notify Difference:

- Schedule text, voice and email notifications to launch at a specific time.
- Select any combination of students, staff and contacts for recipients. Use familiar AdminPlus selection criteria for adding recipients, such as by grades, by students, by unique database field, by staff, by contact relationships, or any other contact field-matching criteria.
- AdminPlus Notify is embedded directly within AdminPlus so the notification source data is always up to date. Many other notification solutions require a nightly sync to an outside portal.
- AdminPlus Notify works within the AdminPlus Mobile App so you can send any kind of message on the go at a moment's notice.
- A detailed log audits success or failure for each recipient.
- Phone numbers do not have to be "scrubbed". The interface automatically ignores formatting such as spaces, dashes, decimals, and parentheses when looking for 10 numeric digits.

Our stand-alone **AP Notify** app for iOS® and Android® devices can send notifications to students, parents, and staff via text, voice, and e-mail. It can support individual schools and entire districts.
